Comments on "Gaussian approximation of suprema of empirical processes" (V. Chernozhukov, D. Chetverikov, K. Kato)

2014.9.5./2017.2.18.

(1) In the statement of Corollary 2.2, "for $k = 2, 3$" should be "for $k = 2, 3, 4$". This typo happened in the course of the editorial process and is corrected in the full version posted in arXiv.

(2) Except for Corollary 2.2, $q = \infty$ is excluded (e.g. Theorem 5.1 does not hold with $q = \infty$). Corollary 2.2 is true, and the constants c, C in the corollary can be independent of q. The proof of Corollary 2.2 is bit misleading, but we apply Theorem 2.1 in the proof with $q = 4$, and use "higher" q to obtain the moment bounds.
